

# NYE Dublin.

---

Studio to cover the New Years Eve celebrations in Dublin for RTE.

The Studio position was right beside an outdoor concert stage, so particular attention had to be paid to acoustic dampening. The specifications were as follows:

- Studio 6m wide 8m deep, 3.5m high. On a 2m high platform.
- 2 x 7kw heat/cool air-conditioning units.
- Twin, acoustically lined walls, acoustically lined roof panels, acoustic carpet underlay, and a twin glass, double framed, window. Readings showed 90 to 100 db directly outside the Studio, while simultaneously readings inside the Studio showed 60 to 70 db, omitting the need for headsets.
